ELEMIS CARBON FOOTPRINT ANALYSIS FINANCIAL YEAR 2025

METHODOLOGY

The GHG protocol methodology was used for ELEMIS GHG emissions calculations. All greenhouse gases were considered and converted into the Carbon Dioxide Equivalent (CO₂e). Note that our carbon footprint has been audited by an accredited third party.

ELEMIS CARBON INVENTORY

All categories were included:

Scope 1: Fugitive emissions, mobile combustion, stationary combustion

Scope 2: Location and market-based emissions

Scope 3: Use of sold products, purchased goods and services (packaging, raw materials, merchandising, sub-contractor production site, others), downstream transport, employee commuting, end of life treatment of sold products, capital goods, upstream transport, waste generated in operations, fuel & energy related activities.
